

Take-Home Assignment — Software Developer Intern

Overview

Your task is to build a **Second-Hand Marketplace web platform** — a place where users can list items they want to sell, browse listings from others, and connect with sellers.

Think of it as a lightweight, modern alternative to Craigslist. **You decide the name, the look, and the feel.**

This is your canvas — use it to show us how you think, design, and build.

What We're Looking For

We want to see:

- How you **approach a problem** and break it down
- How you **make decisions** when things are ambiguous
- Your **creativity** — the features you choose to build, the UX you design
- Clean, readable, and well-structured code
- A working, **deployed** product — not just local

This is not a checklist to complete. It is a window into how you work.

Core Features (Build What Makes Sense)

These are the building blocks. You don't need to implement everything — **prioritise based on your time and what you think matters most for the product.**

Authentication

- User signup and login
- Basic session/auth management

Listings

- Create a listing (title, description, price, category, images)
- Edit and delete your own listings

- Mark a listing as sold

Browse & Discovery

- Browse all listings
- Filter by category and/or price range
- Search by keyword

Seller Interaction

- A way for a buyer to contact or inquire about a listing (messaging, inquiry form, or any approach you think fits)

User Profile

- View your own listings
 - Basic profile info
-

Freedom & Creativity

There are no restrictions on tech stack. Use what you're comfortable with. A suggested starting point if you're unsure: React, Node.js/Express, MongoDB — but this is just a suggestion, not a requirement.

You are free to:

- Add features beyond what's listed above
- Design your own UI/UX — make it look good
- Name the platform whatever you like
- Make product decisions — if something is ambiguous, make an assumption that makes sense for the user and the product, and note it down

The best submissions will show **original thinking**, not just covered requirements.

Time & Planning

You have **Saturday and Sunday** (submit by end of day Sunday).

Plan with time in mind. It is completely fine — and expected — that you won't build everything. Prioritise, scope wisely, and do your best work on what you choose to build. A focused, well-executed subset is far better than a rushed, broken full implementation.

If you hit something ambiguous, don't wait — make a reasonable assumption and move forward. Note your assumptions briefly in your README.

Deployment

Your platform must be **live and accessible** — both frontend and backend.

❑ **No spending required.** Use free-tier deployment tools. Suggested options:

- **Frontend:** [Vercel \(https://vercel.com\)](https://vercel.com), [Netlify \(https://netlify.com\)](https://netlify.com)
- **Backend:** [Render \(https://render.com\)](https://render.com), [Railway \(https://railway.app\)](https://railway.app), [Fly.io \(https://fly.io\)](https://fly.io)
- **Database:** [MongoDB Atlas \(https://www.mongodb.com/atlas\)](https://www.mongodb.com/atlas) (free tier), [Supabase \(https://supabase.com\)](https://supabase.com), [PlanetScale \(https://planetscale.com\)](https://planetscale.com)

Submission

Reply to this email with the following:

Demo Video	A screen recording walkthrough of your platform (upload to YouTube as unlisted or Google Drive, and share the link)
GitHub Repo(s)	Link(s) to your code — frontend and backend (can be a monorepo or separate)
Deployed Links	Live URLs for both frontend and backend

Make sure all links are accessible before submitting.

For any queries, reach out at: jagankrishna.nallasingu@screenwithpeek.com
(<mailto:jagankrishna.nallasingu@screenwithpeek.com>)

Checklist Before Submitting

- ☐ Platform is live and accessible via a public URL
- ☐ GitHub repo is public (or access is shared)
- ☐ Demo video is recorded and link is shareable
- ☐ README includes: setup instructions, assumptions made, features built, and tech stack used
- ☐ All submission links are included in the reply email

Good luck — we're excited to see what you build.
